How To Execute?

Software Requirements:

- JDK 8(Do not install latest version of JDK)
  https://www.oracle.com/in/java/technologies/javase/javase-jdk8-downloads.html
- NetBeans IDE
  https://netbeans.org/downloads/6.1/index.html
- MySql (MySql command line atleast)
  https://dev.mysql.com/downloads/installer/

After installing the required softwares, import database from project to you local server. For that:

- Open terminal/command prompt.
- Copy following command 'mysql -u <your-user-name> -p' and enter your password.
- Create a local database in your server using 'create database <database-name>' and close mysql.
- Now copy this 'mysql -u *<your-user-name>* -p *<database-name> < "<path-of-project\filename.sql>"* ' (without quotes).
- Enter your password and wait for while.

Now project is ready to execute.

Steps of Execution:

- Open the NetBeans IDE and load the project using ctrl+shift+o.
- Press F6 or go to the Run tab and click on Run.
- That's it. It is very simple.
